

WHAT IS CLAIMED IS:

1. A mobile communications device comprising: computer means comprising a micro processor, at least one memory means, at least one input/output terminal, and a communication controller; an audio system communicatively connected to said computer means; wireless communications means connected to said communication controller and configured for selectively and simultaneously transmitting and receiving analog and digital signals of varying frequencies; cell phone means connected to one or both of said audio system and said computer means, and configured for cell phone communication via said wireless communications means; wherein said communication controller provides wireless interconnectivity of said computer means and a worldwide computer network through said wireless communications means in wireless communication with a local internet service provider portal to said network, said audio system comprising a media device responsive to normal read-only data, and said computer means having operating software contained on one of said memory means.
2. The communications device of Claim 1 wherein said wireless communications means comprises at least one transmitter and at least one receiver each configured for wireless communication, and wherein said communication controller is configured to distinguish and modulate

between said analog and digital signals which are received by said receiver and to be transmitted by said transmitter, and further configured to separate said signals normal to each of said audio system, cell phone means, and wireless interconnectivity of said computer means and said network.

3. The communications device of Claim 1 or Claim 2 wherein said wireless communications means further comprises an antenna configured for transmitting and receiving said signals and an amplifier for amplifying said signals received.
4. The communications device of Claim 1 wherein said media device comprises at least one of a CD player and CD-ROM driver.
5. The communications device of Claim 1 wherein said media device comprises a CD-ROM driver configured for loading said read-only data into one said memory means of said computer means.
6. The communications device of Claim 5 wherein said CD-ROM driver comprises one of said memory means.
7. The communications device of Claim 1 wherein said audio system further comprises at least one speaker and at least one microphone, said communications device further comprising a cell phone slot electronically connected to said computer means, said cell phone means comprising a cell phone inserted into said slot, said cell phone having contacts in

communication with sensors in said slot, said cell phone being communicatively and operatively connected through said slot to said audio system by said speakers and said microphone.

8. The communications device of Claim 7 wherein incoming and outgoing communication via said cell phone is enabled through said communication controller of said computer means, wherein independent communication functionality of said cell phone is disabled in favor of said functionality being enabled by said communication controller.
9. The communications device of Claim 1 wherein said audio system further comprises a radio device.
10. The communications device of Claim 9 wherein said radio device is communicatively connected to said wireless communications means through said communication controller.
11. The communications device of Claim 9 or Claim 10 wherein said radio device comprises a car stereo system.
12. The communications device of Claim 10 wherein said computer means selectively disables said radio device when said cell phone means is in operation for communication with said cell phone.
13. The communications device of Claim 1 further comprising a receiving means for receiving processed data via a Department of Motor Vehicles server, and means for assigning new phone numbers in reference to

adopting a new number dialing method, and means for communicating between a plurality of vehicles with a single touch button.

14. The communications device of Claim 13 wherein said device is configured to be communicative with a plurality of highway signs.
15. The communications device of Claim 13 wherein a tag number is implemented as a cell phone number, responsive to a regular cell phone number dialing system.
16. The communications device of Claim 13 further comprising a detecting means configured for communication with other said communications devices for permitting communication between vehicles.
17. The communications device of Claim 13 wherein said computer means is communicatively responsive to advertising signals received by said wireless communications means.
18. The communications device of Claim 1 wherein said operating software comprises one or more of a word processor program and an internet browser.
19. The communications device of Claim 18 wherein said program and said browser are responsive to incoming and outgoing said signals relating to said wireless interconnectivity of said computer means and said network.
